effective coastal engineering is expensive but it is not as costly as neglect or ineffective intervention good practice needs to be based on sound principles but theoretical work and modelling also need to be well grounded in practice which is continuously evolving conceptual and detailed design has been advanced by new industry publications since the publication of the second edition this third edition provides a number of updates the sections on wave overtopping have been updated to reflect changes brought in with the recently issued eurotop ii manual a detailed worked example is given of the calculation of extreme wave conditions for design additional examples have been included on the reliability of structures and probabilistic design the method for tidal analysis and calculation of amplitudes and phases of harmonic constituents from water level time series has been introduced in a new appendix together with a worked example of harmonic analysis and a real life example is included of a design adapting to climate change this book is especially

useful as an information source for undergraduates and engineering msc students specializing in coastal engineering and management readers require a good grounding in basic fluid mechanics or engineering hydraulics and some familiarity with elementary statistical concepts

this volume discusses the latest advancements used in various stereological methods to study different neural structures the chapters in this book cover topics such as microglia measurements estimation of axonal length morphological analysis of large nuclei such as the human caudate nucleus assessments of tissue damage after spinal cord injury in rodents and the application of automatic stereological methods and artificial intelligence to neural tissue in the neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory cutting edge and comprehensive advances in stereology for neuroscience is a valuable resource for researchers who are interested in learning more about this important and developing field

although the complexity and capability of flight simulators have matched the growth of aerospace technology there has until now been no textbook dealing specifically with the design and construction of flight simulators this is a primary purpose of flight simulation written in collaboration with a number of internationally known specialists the book considers the subject in three sections firstly it introduces the concept of simulation in order to identify the essential elements which make up the modern flight simulator the development of these elements is also traced through the historical evolution of flight simulation the main section of the book commences with an exposition of the mathematical models into dynamic physical devices capable of representing the response of a specific aircraft and its systems the simulation of the flight environment is also covered in relation to cockpit motion systems and methods of representing the external visual scene another important aspect of simulation the design of instructor and operating stations is given separate attention the final section considers the application of flight simulation to research and training and concludes with an appraisal of future prospects and developments
